

Advancing LCA Methodology, for a Greener Europe

HARMONISED
LCA ALLIANCE

The Bioeconomy is one of the main catalysts for sustainable change and transition, tackling key economic, societal, and environmental challenges faced by the EU.

In this context, the Life Cycle Assessment (LCA) serves as a reference method for environmental assessment. However, it is currently fragmented into several practices.

The Harmonized LCA Alliance aims to improve the LCA method in the construction, woodworking, textile, pulp and paper, and bio-chemical sectors allowing them to have a common integrated tool to assess and improve their sustainability performance.

**The main solutions, applied to the
aforementioned sectors, are:**

- **Create a common framework for the
Life Cycle Assessment methodologies.**
- **Demonstrate the power of the
methodology to improve the environmental
performance**
- **Improve, harmonize, and align the
LCA methodology for the assessment
of bio-based industrial processes**

**HARMONISED
LCA ALLIANCE**
